8VSB is the modulation method used for broadcast in the ATSC digital television standard. ATSC and 8VSB modulation is used primarily in North America; in contrast, the DVB-T standard uses COFDM. A modulation method specifies how the radio signal fluctuates to convey information.

Where To Download Digital Tv Demodulator For Atsc

ATSC and DVB-T specify the modulation used for over-the-air digital television; by comparison, QAM is the modulation method used for cable. The specifications for a cable-ready television, then, might state that it supports

ATSC is the digital HD TV standard used within the United States and Canada. It is 6 MHz wide so the RTL-SDR with its maximum bandwidth of about 2.8 MHz cannot decode this signal. However, higher end SDR's such as the SDRplay, Airspy and HackRF have larger bandwidths that

Where To Download Digital Tv Demodulator For Atsc

can easily cover 6 MHz. One SDRplay owner was able to figure out a way to decode ATSC by using a decoder written in GNU Radio .
