The use of aluminum can potentially reduce the weight of the vehicle body. Recent developments have shown that up to 50% weight saving for the body in white can be achieved by the substitution of steel by aluminum. Magnesium is another light metal that is becoming increasingly common in automotive engineering.

They will also find out how the size of the shop makes a difference in the types of job opportunities available.

AUTO BODY REPAIR BASICS - Infobase

1 Body structure The core element of any car is the body structure. The car body connects all the different components; it houses the drive train and most importantly carries and protects passengers and cargo. The body structure needs to be rigid to support weight and stress and to securely tie together all the components.
