The main difference between cognition and perception is that cognition is the mental process of acquiring knowledge and understanding through thought, experience, and the senses, but perception is the ability to see, hear or become aware of something through the senses. Cognition and perception are two inherently tied concepts.

I outline the distinction between perception and cognition, and give an overview of how cognitive influences were rejected, and later reincorporated back into, 3D vision. Visual Shape (Chapter 2 & Chapter 3) Traditional theories argue that 3D vision integrates binocular disparity, perspective, and shading into a single coherent percept.

~~Visual Perception and Spatial Cognition | The  
University ...~~

Visual perception is the ability to interpret the surrounding environment using light in the visible spectrum reflected by the objects in the environment. This is different from visual acuity, which refers to how clearly a person sees (for example "20/20 vision"). A person can have problems with visual perceptual processing even if they have 20/20 vision.
